

I am opposed to authorization and implementation of BPL because sufficient evidence exists to support the Amateur Radio Relay League's contention that nationwide implementation of BPL will cause harmful interference on the US Amateur Bands. Data from recent ARRL field studies in four states where BPL is undergoing testing indicates significant levels of RFI on the high frequency bands between 2 and 80 MHz. As a licensed amateur, I implore the FCC to delay any further rollout of BPL until additional data is collected, validated, and studied.
